WORK EXPERIENCE

Senior Software Engineer

Walmart Global Tech

12/2025 - Present

Core Responsibilities

- Developing backend services supporting large-scale supply chain and warehouse operations
- Contributing to distributed systems for order orchestration and fulfillment workflows
- Collaborating with cross-functional teams to enhance reliability and scalability of microservices

Senior Associate

Publicis Sapient

11/2023 - 12/2025

Core Responsibilities

- Led modernization of Blu Label Telecoms (BLT) by migrating core systems from legacy AEON to BluSky, building scalable REST APIs processing 150k+ transactions/day with Java, Spring Boot, and Redis.
- Designed and implemented a microservices-based invoicing & credit-note platform handling 100k+ monthly transactions, achieving 99.9% reconciliation accuracy and reducing manual interventions by 40%.
- Architected a high-availability asynchronous Scheduler service using batch and parallel processing, cutting archival job time by approximately 60%.

Senior Software Engineer

Mtree

02/2022 - 08/2023

Responsibilities

- Designed and scaled backend components for NEXT platform, enabling 1,000+ restaurants to improve staffing workflows, increasing shift allocation accuracy by 20%.
- Engineered a shift scheduling engine handling 10k+ weekly transactions, improving crew utilization and stability across client teams.
- Built a proxy-user framework reducing onboarding time by 50%, leading to faster adoption across 50+ client accounts
- Automated 60% of operational tasks with Rundeck, cutting manual work by 40+ hours/month and lowering support ticket volumes.

System Engineer

TCS

12/2018 - 02/2022

Responsibilities

- Designed real-time trade management and settlement modules in TCS BaNCS for large-scale financial systems.
- Built robust backend services in Java, J2EE, and Spring to handle business validations and seamless data integration.

SKILLS

Java

Springboot

Microservices

MySQL

REST API

AWS

Azure

Kafka

Redis

Docker

Kubernetes(EKS)

Hibernate

GIT

JIRA

Dynatrace

Rundeck

PROJECTS

COMPILER DESIGN | C SEMANTIC PHASE (05/2016)

- Enhanced a C compiler by implementing parse tree construction and symbol table generation using formal grammar rules.

MULTI-ROBOT PATHFINDING SYSTEM (06/2017)

- Developed a system for shortest path optimization using Dijkstra's and Convex Hull algorithms; applied advanced data structures and algorithmic analysis.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science

JSSATE, NOIDA

06/2014 - 06/2018

Percentage: 70

ACHIEVEMENTS

TCS-Hackathon

2019, TCS

Badminton State Winner

2018, Uttar Pradesh

INTERESTS

Badminton
